No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                Score

R. Site2: DraII (CACCATGTG)

Rescription: 1st strand cDNA was primed with an oligo (dT) primer pescription: 1st strand cDNA was synthesized (ATGTGGCCTTTTTTTTTTTTTTT); double-stranded cDNA was synthesized using specific 5' and 3' primers and amplified by PCR. The PCR product was digested with Sfil and size selection was performed to exclude fragments <1.5kb.The Sfil-digested PCR product was cloned into distinct DraIII sites of pME185-FL3. XhoI sites just outside the DraIII sites can be used to isolate the CDNA insert. Libraries were constructed by oligo-capping method. Libraries were made from:

QCCE: cerebellum cortex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            distribution: clone distribution information can be found at:

Chen,H., Rossier,C. and Antonarakis,S.E.
Cloning of a human homolog of the Drosophila enhancer
(EZH2) that maps to chromosome 21q22.2
Genomics 38 (1), 30-37 (1996)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /product="enhancer of zeste"

Consortium/LLNL at: http://image.llnl.gov
Series: IRAK Plate: 10 Row: 1 Column: 8
This clone was selected for full for the sequencing because it
passed the following selection criteria: matched mRNA gi: 6679720
This clone grew slowly and was rescued by PCR.
